

Hampton in Arden - Pedestrian Access & Village Gateway Improvements

Below are examples of the types of features that are proposed as part of the works. Please refer to the plan for locations.

Road narrowing & Give Way priority Gateway feature (Locations 1 & 6)

These features complement and enhance existing village gateway speed limit signage. They are intended to draw attention to the change in speed limit and character of the road, increasing driver awareness and encouraging improved driver behaviour and speed management. The feature will give priority to traffic exiting the village with vehicles entering the village having to give way.

New pedestrian crossing point provided on a table (Locations 2, 3, 4 & 5)

New raised crossing point which aids pedestrians when crossing the road. They highlight the presence of the crossing to drivers whilst encouraging changes in driver behaviour and vehicle speeds.

Crossing point with road narrowing/footway build out (Location 4)

These features provides a shorter crossing point which aids pedestrians to cross the road, improves pedestrian visibility and provides a visual reminder to drivers.
